Job Description

Profile

Member of Technical Staff

Job Description

We, at ThoughtSpot, are looking for a passionate Engineer. You will be a hands-on engineer, with a customer-centric mindset, responsible to design, build, and drive the backend systems. Knowledge of distributed systems is a plus. You'll collaborate with a cross-functional team of engineers, product managers, and designers. Responsibilities ● Design and implement scalable backend systems that process and manage large volumes of customer data ● Analyze and improve the efficiency, scalability, and reliability of our backend systems. ● Write robust code and write functional, performance, and system test suites ● Work as a member of a team, helping the team respond quickly and effectively to business needs Required skills/qualifications ● Strong coding skills in modern languages such as C++/GO/Java/Python/Javascript ● Having the ability to write clean, effective code is a must and drill deep on technical implementation. ● Have experience working with cross-functional teams in a dynamic environment. ● Good understanding of distributed systems, scalability, and availability ● Strong problem-solving skills, algorithmic thinking, and a strong foundation in how systems work. ● Strong preference to candidates with data science, compilers, machine learning or database skills
